

An Inconvenient Truth

The world, as we know it, is in trouble.

In the last few years we've seen:

- The rise of category 4 & 5 hurricanes
- The spread of treatable diseases (e.g. malaria)
- Increased flooding
- Wildlife pushed to extinction
- Heat waves
- Drought and wildfires

So why do we continue to ignore global warming? It's a serious issue that boasts severe environmental consequences.

Al Gore's documentary, *An Inconvenient Truth*, takes an in-depth look at the facts surrounding global warming and forecasts a pretty grim future.

This documentary has generated worldwide attention because its message is clear: it's going to take a serious, collaborative approach to stop this ball from rolling out of our control.

Every little bit *does* count. We have a moral obligation to our families and to the generations to come to work together to create positive change.

Global warming is not your problem or mine, it's ours. What are *we* going to do about it?
